1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 8 and 10 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyashita et al.

Miyashita et al. discloses a method of binder extraction comprising:

providing a molded product containing a binder (col. 4, line s10-14); and extracting the binder with a supercritical fluid under hip conditions (col. 5, lines 21-32).

Miyashita et al. further discloses wherein the supercrital fluid is carbon dioxide.

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein

were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

5. Claims 9 and 11-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Miyashita et al.

Miyashita et al. discloses the invention substantially as claimed (see paragraph 2 above). However, Miyashita et al. does not disclose wherein the supercritical fluid is a mixture of carbon dioxide and xenon.

It is common knowledge that xenon is an equivalent supercritical fluid organic extraction medium to carbon dioxide, the substitution thus being obvious.

6. Claims 1-7 are allowable, the prior art not teaching or suggesting loading a weighing device into the cahmbe of the hot isosotatic press to be filled with a supercritical fluid.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel J. Jenkins whose telephone number is 571-272-1242. The examiner can normally be reached on M-TH6:30AM-5:00PM.
